

SOLAR ENERGY / SOLAR POWER PLANTS

The institute has achieved a remarkable level of energy self-sufficiency, meeting its electricity demands entirely through on-site generation, testifying its commitment to sustainable energy practices. The administrative block currently harnesses the power of the sun through a 35- kilowatt solar energy system, while the Christ Hill campus functions with an 60-kilowatt solar energy system.

BIOGAS PLANT

The biogas plant harnesses the power of organic waste generated within the institution and is then channeled directly to the canteen stoves, effectively powering the cooking process. This 15 cubic meter biogas plant, complemented by a 3 cubic meter digester, was commissioned in 2008 and operates for an average of 10 hours per day, contributing to the institute's focus on environmental sustainability.

RAINWATER HARVESTING

The institution has implemented a sophisticated rainwater harvesting system featuring a network of strategically positioned tanks with 10.10 Lakh Litre of rainwater. This system efficiently collects rainwater from rooftops, minimizing the need for extensive piping infrastructure and reducing runoff from paved surfaces.

ORGANIC FARMING

By combining education, sustainability, community engagement, and research, organic farming in colleges provides a valuable asset for both students and the wider community. It fosters a deeper understanding of agriculture, promotes sustainable practices, and contributes to a more resilient and equitable food system.
